The Wattsense® Tower

A building management product to reduce costs, upgrade BMS, and centralise data.

Gain visibility and control

Access data and monitor your building from anywhere.

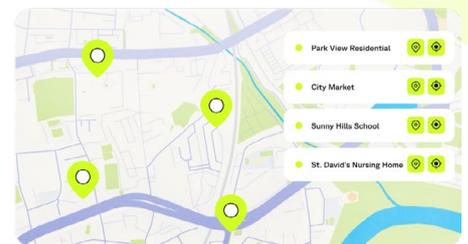

View dashboards, graphs, and schematics

Set up alarms for your equipment

Manage multiple sites remotely

Connect any IoT sensors, meters, lights, HVAC, BMS...

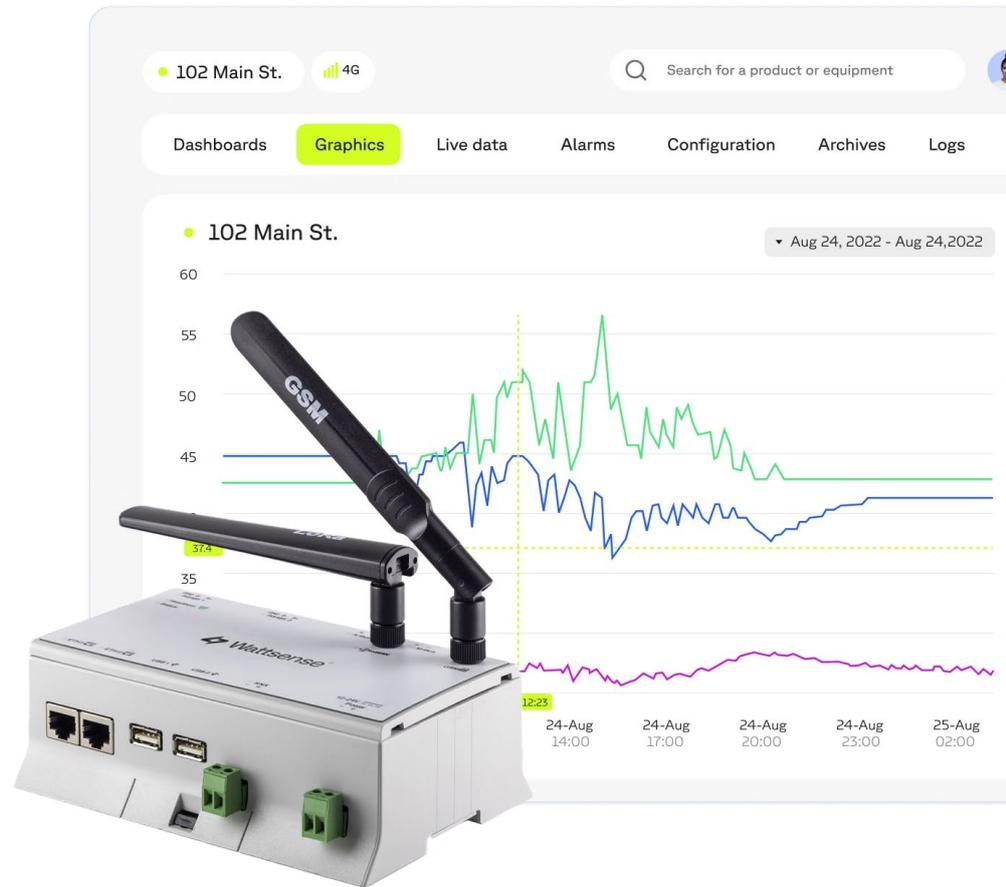

Deploy digital services for more efficient buildings
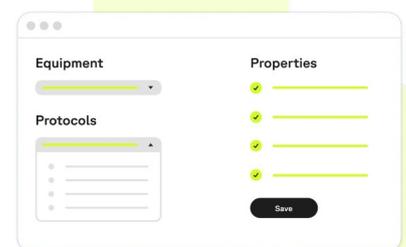

No coding skills required thanks to the Configuration Wizard

The Tower user console

A web-based interface to connect your equipment in a few clicks with a growing equipment library of over 700 devices, retrofit your BMS and stay in control of your building.

Dashboards

Easily share data and optimise your building management strategy with data visualisation tools.

Alarms

Your technicians are the first notified when there are issues with the building's equipment.

Graphs

Make informed decisions by analysing the main trends in your building.

Remote Configuration

Benefit from remotely configuring your equipment through the console. Save time and reduce trips to sites.

Live Data

Act using real-time information. Make more informed decisions, respond quickly to events, and improve operational efficiency.

Logs

Keep track of all the events that take place on your Tower. An essential tool for monitoring and managing your network.

How does it work?

Step 1

Install the box

In less than a day install the box on the electrical cabinet of your building. Connect it to your networks and equipment.

Step 2

Configure your equipment remotely

Your technicians are the first notified when there are issues with the building's equipment.

Step 3

Deploy your apps or connect to a BMS

Integrate digital services via our API. Upgrade your building by retrofitting your BMS.
